Description Information

Who are you trying to contact? The White House and President Obama

Subject Environmental Protection Agency

Description I have children and two beautiful granddaughters who live in Kanawha County in WV. More than 300,000 people have a chemically contaminated water system in their homes and schools since Jan-9. It's been four weeks and the issues still aren't resolved and corrected to the point where they can safely drink, cook, bathe, or do laundry using their public water system. It was contaminated by a chemical that is used to wash coal by Freedom Industries who filed bankruptcy within a few days of the event. I have been following the story and could include much more in this note, but I know you have the resources to get the complete story with accuracy. Schools were closed for more than a week and re-opened using alternate water sources for a period of time. Schools have now been told they can safely use the public water system again. Yet, just this week during routine testing at schools, the chemical is still there and children are sent home to again wait for things to be safe again. This affects the health, safety, and education of our children as well as the adults. Please please please follow up and insist that the State of WV get this poison removed from our public water system immediately, regardless of the expense. Whatever it takes. I am pleading for your interest and follow up. Thank you in advance for caring about our State and our people to make something happen. Respectfully submitted by
